## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant has amended the claims and thus, the applicant's argument, see p.4, filed 12/12/06, with respect to the rejection(s) of claim(s) 5 and 6 under 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made below.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 5 and 6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claim recites a phase error detector performing phase correction on a received signal through different algorithms S1 ~S5. The claims recite that the algorithms are arranged in an order within the phase error detector. However, the specification does not describe the configuration of the phase error detector that processes the algorithms. Is there a processor within the phase error detector that executes the algorithms? What does the phase error detector consist of? Therefore, the specification does not describe to

Art Unit: 2611

one skilled in the art of the configuration of the phase error detector to enable execution of the algorithms S1~S5.
